Report Overview

Ocimum gratissimum, commonly known as clove basil or African basil, is a perennial herb belonging to the Lamiaceae family, widely recognized for its aromatic leaves and medicinal properties. Native to Africa, Asia, and parts of South America, it is cultivated for its essential oils, which contain high concentrations of eugenol, thymol, and other bioactive compounds, making it valuable in traditional medicine, aromatherapy, and the food and beverage industry. The plant is also used as a culinary herb, insect repellent, and in cosmetic formulations due to its antimicrobial and anti-inflammatory properties. Increasing consumer demand for natural and organic products, coupled with growing awareness of its therapeutic benefits, has driven market expansion, particularly in the pharmaceutical and personal care sectors. However, supply chain inconsistencies, limited large-scale cultivation, and regulatory challenges in essential oil standardization may hinder growth. Emerging markets in Asia-Pacific and Africa show strong potential due to rising disposable incomes and a shift toward herbal remedies, while established markets in North America and Europe continue to demand Ocimum gratissimum extracts for nutraceutical and cosmetic applications. The market is further influenced by sustainability concerns, with organic and fair-trade certifications gaining importance among ethically conscious consumers.
