Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on OCS All-Optical Switching competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. This report examines all-optical switches (OCS). OCS (Optical Path Switching) is a technology that uses optical signals to route data in optical networks, rather than converting them to electrical signals. This method involves switching optical signals directly from one optical fiber to another, eliminating the need for optical-to-electrical and electrical-to-optical conversion. By utilizing optical switches, OCS enables high-speed data transmission, reduced latency, and improved bandwidth efficiency compared to traditional electronic switching methods. This technology is crucial for high-capacity, high-speed communication networks such as telecommunications and data centers, enabling more efficient and scalable network management. Sales of all-optical switches in 2024 are expected to reach 12,192 units, with a unit price of approximately US\$30,058 (including for internal use). OCS all-optical switching is a core device that realizes data exchange based on photonic technology. It has the advantages of high speed, low latency and high bandwidth. It can effectively meet the needs of large-scale traffic scheduling in scenarios such as data centers, cloud computing, 5G bearer networks and high-performance computing. Its market development is driven by the construction of computing power infrastructure and the upgrading of new communication networks. At the same time, with the growth of demand for artificial intelligence and supercomputing, the requirements for low energy consumption and high reliability have further enhanced the application value of this technology. However, in the actual promotion process, it still faces challenges in cost, standardization and ecological maturity. Therefore, future market competition will focus more on technological breakthroughs, industrial chain collaboration and the implementation of

differentiated application solutions.

The global OCS All-Optical Switching market size was estimated at USD 366.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.10% during the forecast period.
