## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on OCS (Optical Circuit Switch) Switch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Optical Circuit Switching (OCS) switches are devices used to exchange optical signals in optical fiber communication networks. They do not rely on traditional electrical signal conversion, but directly exchange and transmit signals in the optical domain. Unlike network devices based on electronic switching, OCS switches process optical signals instead of converting them into electrical signals before switching. Driven by the explosion of AI computing power and the demand for high-performance computing (HPC), the OCS switch (Optical Circuit Switch) market has ushered in significant opportunities. Major customers such as Google have verified the value of OCS in low-latency, high-bandwidth scenarios through TPU cluster networking. It is estimated that in 2026, Google's demand alone will drive the market size to RMB 11 billion (based on the networking of 2 million TPUs). Combined with the exploration of optical switching by other cloud vendors and ASIC vendors, the market potential will be further amplified. However, OCS is still in the early stages of commercialization and faces challenges such as insufficient technical maturity, high cost (Single device costs tens of thousands of dollars), and positioning differences with traditional electrical switches (such as CPO). In addition, the customer verification cycle in the sample testing phase is long, and it will take time for large-scale implementation. In the future, with the evolution of optical modules to 800G/1.6T and the upgrade of data center network architecture (such as liquid cooling and optoelectronic fusion), OCS will accelerate its penetration into the fields of ultra-large-scale distributed training and AI model deployment, and is expected to complement technologies such as CPO and OIO in the long term.

The global OCS (Optical Circuit Switch) Switch market size was estimated at USD 366.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.10% during the forecast period.
