Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on OCTG Seamless Steel Pipe competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. OCTG refers to pipe products used for drilling, oil extraction, and transportation of oil and gas in the oil and gas industry, including casing, tubing, and other related pipes. OCTG pipes are usually made of high-strength, corrosion-resistant seamless steel pipes, and can withstand the high temperature and high pressure environment underground. OCTG seamless steel pipe refers to OCTG pipes made of seamless steel pipes used in oil and gas drilling, extraction, and transportation processes. The production process of seamless steel pipes does not require welding, and tubular structures are directly formed from steel billets through processes such as extrusion and rolling. Compared to welded steel pipes, seamless steel pipes have better strength and uniformity, and can better adapt to the complex and demanding environmental requirements in oil and gas extraction. In 2024, global OCTG Seamless Steel Pipe production reached approximately 9,499 K MT, with an average global market price of around US\$ 1,234 per MT. The annual production capacity of a single production line is 100,000 tons, with a gross profit margin of about 20%. Upstream raw materials: Round tube blank: core raw material, that is, round steel of a specific steel grade. Alloying elements: nickel, chromium, molybdenum, etc., used to produce corrosion-resistant and high-strength steel grades. Downstream application areas: Oil and gas exploration and development companies, oilfield technical service companies. Raw material cost: 50%-70%; manufacturing overhead: 20%-35%; labor cost: 5%-10%. OCTG steel pipe connection types: API connection and advanced connection. API connection is a widely used connection method in the oil and gas industry. They comply with and exceed all regulatory standards of the American

Petroleum Institute (API). The API defines two types of connectors: interference free connectors (NU) and external interference connectors (EU). NU connection is used to connect two pipes with the same diameter, while EU connection is used to connect two pipes with different diameters. Advanced connection is a special proprietary connection that has advanced features that API connections do not possess. Most advanced connections provide metal to metal sealing to enhance the integrity of high-pressure sealing. Advanced connections have the characteristics of direct connection, no slots, and special gaps. This connection is suitable for gas wells, high-pressure wells, and wells that are prone to producing corrosive wastewater.

The global OCTG Seamless Steel Pipe market size was estimated at USD 11721.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
