Report Overview

Octyldodecyl PCA is a derivative of pyrrolidone carboxylic acid (PCA), a naturally occurring component of the skin's natural moisturizing factor (NMF). It functions primarily as an emollient and skin-conditioning agent in cosmetic formulations, offering excellent moisturizing properties by enhancing water retention in the stratum corneum. Due to its lipophilic nature, it is particularly effective in oil-based or anhydrous products, such as serums, creams, and sunscreens, where it improves texture, spreadability, and long-term hydration without leaving a greasy residue. The ingredient is valued for its compatibility with various formulations and its ability to stabilize other active ingredients, making it a versatile choice for skincare brands targeting anti-aging, barrier repair, and hydration benefits. Its mildness and non-irritating properties also make it suitable for sensitive skin formulations.
