Abstracts

Octylphenol ethoxylate (OPE) is a nonionic surfactant derived from the ethoxylation of octylphenol, a compound produced from phenol and diisobutylene; it belongs to the broader alkylphenol ethoxylates (APEs) family and functions primarily as an emulsifier, wetting agent, detergent, or dispersant in various industrial, commercial, and household applications, including agricultural formulations, textile processing, paints and coatings, metal cleaning, and personal care products, though its use has declined in certain regions due to environmental and health concerns over biodegradation byproducts like octylphenol, which is considered an endocrine disruptor.
