## Abstracts

An odor control atomization system is a device system that utilizes high pressure to atomize water or deodorant solution into tiny particles and evenly spray them into designated areas to remove or neutralize malodorous gases. By fully contacting atomized particles with odor molecules, this system effectively removes odors in the air through mechanisms such as physical adsorption, chemical neutralization, or biodegradation. Widely used in places with high concentrations of malodorous gases, such as waste treatment plants, sewage treatment plants, livestock farms, and food processing plants, odor control atomization systems not only rapidly eliminate odors but also maintain air freshness, improving work environments and residents' quality of life.

The global Odor Control Atomization System market size was estimated at USD 1341.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
