Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Odor Control Zeolites competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Odor Control Zeolites production reached approximately 1,249.64 kilotons with an average global market price of around US\$685 per ton. Odor Control Zeolites are specialized microporous minerals that excel in capturing and retaining odor-causing molecules due to their unique lattice-like structure, which acts as a highly effective sieve for malodorous compounds. By adsorbing a wide array of offensive organic and inorganic substances, such as hydrogen sulfide and ammonia, these zeolites significantly reduce the concentration of unpleasant odors in the air. Their ability to selectively bind with odor molecules and their capacity for regeneration make them an invaluable asset in purifying environments, ensuring a cleaner and fresher atmosphere that enhances overall comfort and well-being.

The global Odor Control Zeolites market size was estimated at USD 856.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
