Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Odorless DCP (BIPB) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Odorless DCP (BIPB) production reached approximately 37,069 tons, with an average global market price of around US\$9,000 per ton. Odorless DCP (BIPB) is a peroxide cross-linking agent. Generally, DCP vulcanized products have an unpleasant smell. BIPB cross-linking agent can replace DCP. BIPB products have almost no odor, so they are commonly known as odorless DCP. Odorless DCP (marketed forms of BIPB) is positioned as a low-odor alternative for high-temperature peroxide crosslinking of polyolefins, and its market outlook is positive. Compared with conventional dicumyl peroxide (DCP), BIPB offers a more controllable decomposition profile and a wider processing window, typically yielding fewer volatile by-products and lower residues, which improves final product odor, electrical performance, and thermal-aging resistance; its superior thermal stability and storage behavior also support large-scale industrial supply. Development trends emphasize low-residue/low-odor formulations, masterbatch and system-level solutions, and strengthened safety and regulatory documentation; suppliers increasingly pair chemistry improvements with technical service and localized logistics. While alternative crosslinking technologies exist, BIPB's ease of integration into existing extrusion lines, material compatibility, and process robustness make it an attractive substitute where DCP's narrower window or higher by-product/residue profile is limiting. In short, odorless BIPB is likely to displace traditional DCP in applications demanding higher processing temperatures, cleaner end-product profiles, and tighter compliance.

The global Odorless DCP (BIPB) market size was estimated at USD 334.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
