## Abstracts

OES (Optical Emission Spectroscopy) Endpoint Detection Systems are in-situ plasma monitoring devices used in semiconductor manufacturing to determine the precise moment when an etching, cleaning, or deposition process has reached its target endpoint. These systems analyze the optical emission spectrum of the plasma inside etch or deposition chambers?monitoring intensity changes at specific wavelengths associated with process byproducts?to identify layer-to-layer transitions, prevent over-etch or under-etch, improve uniformity, and protect wafer yield. The industry chain begins upstream with suppliers of spectrometers, diffraction gratings, optical fibers, CCD/CMOS detectors, plasma-resistant optical windows, signal-processing electronics, motion/positioning parts, mechanical housings, and firmware/software development. Midstream consists of specialized OES endpoint detection manufacturers such as Verity Instruments, HORIBA, Oxford Instruments, Atonarp, and Spectral Products, who integrate sensors, optical modules, algorithms, and digital interfaces into complete endpoint detection units. Downstream, these systems are installed in semiconductor process equipment from Lam Research, TEL, Applied Materials, ASM, AMEC, NAURA, Oxford Instruments, and others to provide real-time process control in dry etching, plasma cleaning, PECVD, ALD/ALE, and wafer-transfer plasma steps. Due to high technical barriers and the critical impact on wafer yield, the industry average gross margin is relatively high?typically 40?55% for leading suppliers, 30?40% for mid-tier instrument companies, and 25?35% for lower-cost domestic suppliers. Production is not measured in ?lines? but in assembly & calibration cells; a single manufacturing cell can typically produce 1,000?5,000 OES endpoint modules per year, depending on system complexity (simple spectrometer modules vs. complete advanced algorithms + multi-channel units). Overall, OES endpoint detection systems are a high-value, precision instrumentation category with strong demand growth driven by advanced node etching, tighter process windows, multi-patterning, and expansion of ALD/ALE applications in

logic and memory fabrication.

The global OES Endpoint Detection System market size was estimated at USD 208.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
