Abstracts

An off-axis paraboloid mirror is an optical element, typically used in reflective systems, that has a parabolic shape but whose optical axis does not coincide with the axis of the system. Unlike conventional axisymmetric parabolic mirrors, off-axis parabolic mirrors are designed to avoid aberrations such as spherical and coma aberrations caused by reflections in axial optical systems, thus providing higher optical performance. This mirror design makes it important in high-precision optical applications such as satellite communications, telescopes, laser systems and high-performance microscopes. Off-axis parabolic mirrors are able to focus light efficiently in a reflective system with lower aberrations for applications requiring very high optical quality.

The global Off-axis Paraboloid Mirror market size was estimated at USD 88.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
