Abstracts

Off gas treatment catalysts are specialized chemical substances designed to facilitate the purification of industrial exhaust gases by promoting reactions that convert pollutants?such as volatile organic compounds (VOCs), nitrogen oxides (NOx), carbon monoxide (CO), and other hazardous air pollutants?into less harmful compounds like carbon dioxide, water, and nitrogen. These catalysts are critical components in systems like catalytic oxidizers, selective catalytic reduction (SCR) units, and other air pollution control technologies, enabling industries to meet stringent environmental regulations, reduce emissions, and minimize ecological impact. Their formulation often involves active materials such as precious metals (e.g., platinum, palladium), metal oxides, or zeolites, supported on high-surface-area substrates to maximize efficiency, durability, and reactivity under specific temperature and compositional conditions.

The global Off Gas Treatment Catalyst market size was estimated at USD 1025.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
