Report Overview

An off-grid solar inverter is a crucial component of off-grid solar power systems. Its primary function is to convert the direct current (DC) electricity generated by solar panels into alternating current (AC) electricity suitable for powering standard household or industrial appliances and for distribution to the electrical grid. Unlike grid-tied inverters that work in conjunction with the grid, off-grid inverters are designed for standalone or isolated power systems where there is no connection to a utility grid.

The global Off-Grid Solar Inverter market size was estimated at USD 3419.80 million in 2023 and is projected to reach USD 6667.18 million by 2032, exhibiting a CAGR of 7.70% during the forecast period.

North America Off-Grid Solar Inverter market size was estimated at USD 1012.61 million in 2023, at a CAGR of 6.60% during the forecast period of 2024 through 2032.
