Abstracts

An "Off-Site Light Steel Frame" typically refers to a construction method where light steel framing components, often made of cold-formed steel sections, are manufactured off-site in a controlled factory environment and then transported to the construction site for assembly. This approach is part of the broader trend of off-site or modular construction, where building components are prefabricated before being brought to the final construction location. Continued advancements in manufacturing technologies, such as computer-aided design (CAD), building information modeling (BIM), and robotics, can lead to more efficient and precise fabrication of light steel frame components off-site.

The global Off-Site Light Steel Frame market size was estimated at USD 27980.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
