## Abstracts

Offline Automatic Optical Inspection (AOI) Equipment refers to specialized machinery and technology used in quality control and inspection processes within manufacturing, particularly in industries that involve electronics, semiconductors, printed circuit boards (PCBs), and other precision components. Unlike traditional AOI systems that operate in real-time during the production process, offline AOI equipment is designed for post-production inspection, often in a separate quality control or testing phase. This equipment is used to identify defects, errors, or inconsistencies in manufactured parts, components, or assemblies. Offline AOI systems are increasingly integrating machine learning and artificial intelligence (AI) algorithms for defect detection and classification. This allows for more accurate and adaptive inspection processes, reducing false positives and improving overall inspection efficiency.

The global Offline Automatic Optical Inspection Equipment market size was estimated at USD 855.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
