The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Offshore Aluminium Helideck competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Offshore aluminium helideck refers to a helicopter landing platform constructed primarily from high-strength, marine-grade aluminium alloys and installed on offshore structures such as oil rigs, FPSOs, and wind farm substations. Aluminium helidecks offer significant advantages over steel, including lower weight, corrosion resistance, and easier installation and maintenance. These helidecks comply with international standards (e.g., CAP 437, ICAO Annex 14) and are engineered to support helicopter operations in harsh offshore environments while minimizing structural load on the host platform.
