Report Overview:

In order to complete workover operations, workover rigs are needed. A workover rig mainly consists of lifting equipment (winches, derricks, etc.), loop flushing equipment (pumps and manifold systems, etc.), and rotating operation equipment (turntable, etc.). It is similar to an ordinary drilling rig. The operating load is relatively light, so the workover rig's power and other basic parameters, such as the volume, weight, and so on, are relatively smaller than the drilling rig. Though offshore workover rigs are similar to drilling rigs in composition, the installation is different at sea.

The Global Offshore Workover Rig Market Size was estimated at USD 934.10 million in 2023 and is projected to reach USD 1230.48 million by 2029, exhibiting a CAGR of 4.70% during the forecast period.
