Abstracts

PVDF is a non-polar chain polymer with excellent antioxidant and thermal stability. Its molecular structure makes it easy to disperse in solvents such as N-methylpyrrolidone (NMP), forming a uniform slurry. In addition, PVDF also has good chemical corrosion resistance, weather resistance, and electrical insulation properties. PVDF is mainly used as a positive electrode binder in lithium batteries. It can firmly connect the positive electrode active material, conductive agent, and current collector together to form a stable electrode structure. This bonding effect not only improves the mechanical strength of the electrode, but also ensures the stability and safety of the battery during charging and discharging processes.

The global Oil Based Adhesive PVDF market size was estimated at USD 3916.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
