Abstracts

Oil-based stains are a type of "stain paint" that colors by soaking into the wood. There are two types of this stain paint: water-based, which is made with a water base, and oil-based, which is made with an oil base. Oil-based stains, as the name suggests, are paints made with an oil base.The advantage of oil-based stains is that they produce a shine and wood grain that only oil-based paints can, while the disadvantages include a strong odor and difficulty in post-treatment. Oil-based stains are used for painting indoor and outdoor wooden products. Oi-based stains should be selected if the wood grain is to be retained while coloring. Oil-based stains are also widely used for wood decks outdoors and for finishing solid wood flooring and wooden furniture indoors, as they give the applied wood a deep shine.

The global Oil Based Stain market size was estimated at USD 10760.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
