Abstracts

Oil-based VCI (Volatile Corrosion Inhibitor) antirust agents are specialized chemical formulations designed to protect ferrous and non-ferrous metals from corrosion through the application of a thin, protective oil film that contains vapor-phase corrosion inhibitors. These inhibitors sublimate at ambient temperatures, creating a protective molecular layer on metal surfaces even in hard-to-reach areas, offering long-term protection during storage, transit, or in-process applications. The oil base serves as a carrier, ensuring uniform coverage and adhesion while providing temporary lubrication and water displacement properties, making these agents particularly effective in humid or harsh environments where traditional coatings may fail.

The global Oil Based Vci Antirust Agent market size was estimated at USD 125.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
