Abstracts

Oil bottle grade polyester chip is a type of polyethylene terephthalate (PET) specifically formulated for packaging edible oils. Unlike standard PET for water bottles, oil bottle grade PET requires enhanced resistance to oil permeation and chemical interaction with oils, preventing degradation of the bottle and maintaining the oil's quality. This often involves specific additives or modifications to the polymer structure. It also needs to meet food-grade safety standards. Like other bottle-grade PET, it comes in small pellets or chips that are melted and processed into preforms before being blow-molded into bottles.The oil bottle grade polyester chip industry is influenced by several key trends. Firstly, there's a growing emphasis on sustainability, with increasing demand for recycled PET (rPET) in oil packaging. However, incorporating rPET into oil bottles is more challenging than in water bottles due to potential interactions between recycled materials and oils, which can affect taste and quality. This necessitates advanced recycling technologies and rigorous testing to ensure safety and performance. Lightweighting is also a significant trend, aiming to reduce material usage and transportation costs. However, careful consideration must be given to maintaining the bottle's structural integrity and preventing deformation, especially during storage and transportation. Another trend is the development of bio-based PET from renewable resources, although its adoption in oil packaging is still relatively limited due to cost and performance considerations. Improving barrier properties to prevent oil permeation and oxidation is also a key focus, with research into new additives and coatings. Finally, there's a growing demand for improved aesthetics and functionality, including innovative bottle shapes, easy-pour designs, and tamper-evident closures, driven by consumer preferences and market competition.

The global Oil Bottle Grade Polyester Chip market size was estimated at USD 2665.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of
