Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Oil-Injected Rotary Screw Compressor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Oil-Injected Rotary Screw Compressor production reached approximately 3150 k units with an average global market price of around US\$ 400 per unit, a single-line production capacity of approximately 20,000 units/year, and a gross profit margin of approximately 10%-30%. Oil-Injected Rotary Screw Compressor is a type of positive displacement compressor that uses two intermeshing helical rotors (single or twin screw) to trap and compress gas from the intake to the discharge side. During compression, lubricating oil is injected into the compression chamber, serving multiple functions: cooling the gas and rotors, sealing the rotor clearances, and reducing friction. This improves compression efficiency, lowers rotor wear, and controls discharge temperature. The upstream segment involves the production and supply of critical raw materials and components, including high-strength steel for rotors and casings, precision-engineered bearings, copper tubing, electrical motors, and high-performance lubricating oils, all of which directly affect compressor efficiency and reliability. The midstream segment encompasses the design, engineering, and assembly of the compressors themselves, twin-screw or single-screw designs, and variable-speed drives to optimize energy efficiency and performance under varying loads. The downstream segment covers the distribution, installation, and application of these compressors across industrial, commercial, and process environments, including factories, refrigeration plants, chemical processing facilities, and energy infrastructure. System integrators, maintenance providers, and aftermarket service networks play a key role in ensuring reliable operation and long service life.

The global Oil-Injected Rotary Screw Compressor market size was estimated at USD 1259.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
