Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Oil Sheet Composite Sheet Matrix competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The oil-sheet composite substrate is an ultra-hard composite material specifically designed for oil and gas drilling. It utilizes a tungsten carbide carbide skeleton and metals such as cobalt and nickel as a binder, sintered at high temperature and high pressure. As the support for the polycrystalline diamond composite, it provides the drill bit cutting teeth with extremely high impact toughness, structural strength, and thermal stability, ensuring efficient drilling in deep, high-temperature, and high-pressure formations. The upstream supply chain for the oil-sheet composite substrate comprises suppliers of high-purity ultrafine metal powders and diamond micropowders. The midstream comprises high-temperature and high-pressure sintering, precision machining, and non-destructive testing, which require significant technical barriers. The downstream supply chain strictly supports the drill bit manufacturing needs of oil and gas drilling and production service providers. Global annual production capacity is limited by cutting-edge equipment and process patents, resulting in a typical high-tech, medium-volume production model. Production capacity reaches hundreds of thousands of units. Due to its strong technological monopoly and the fact that its products directly influence drilling efficiency and costs, its gross profit margin is among the highest among industrial components. By 2024, oil-sheet composite substrate production reached approximately 320,000 units, with an average global market price of approximately US\$500 per unit. The oil-sheet composite substrate market is experiencing a strong boost from the continued growth of deep-well and unconventional resource drilling activities under the global energy security strategy. Its prospects are deeply tied to improvements in drilling efficiency and the demand for equipment for

extreme working conditions, placing extreme demands on the substrate's toughness, lifespan, and thermal stability. The North American market, with its active shale oil and gas technology and large number of drilling rigs, maintains the largest demand for high-performance products. The European market, leveraging its leading materials research and development capabilities and equipment manufacturers, continues to lead the development of cutting-edge technology standards. The Asia-Pacific market, particularly China, demonstrates the greatest growth potential through increased drilling investment driven by its energy self-sufficiency strategy and the rise of its domestic supply chain. China is gradually becoming a major global technology follower and market participant.

The global Oil Sheet Composite Sheet Matrix market size was estimated at USD 163.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
