Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Oil-soluble Imidazoline Corrosion Inhibitor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of oil-soluble imidazoline corrosion inhibitors reached 180k tons, with an average selling price of \$5,200 per ton. Oil-soluble imidazoline corrosion inhibitors are a class of highly effective organic corrosion inhibitors, formed by reacting fatty acids with polyamines to form an imidazoline structure, modified with an oleophobic group. They exhibit excellent oil solubility, film-forming properties, and corrosion resistance. They are widely used in crude oil extraction, refining, oil and gas pipeline transportation, and petrochemical equipment, effectively inhibiting corrosion caused by carbon dioxide, hydrogen sulfide, and other factors. Upstream raw materials include fatty acids (oleic acid, coconut oil fatty acid), diethylenetriamine, and related solvents. Major suppliers include Oleon, IOI Oleochemical, BASF, and Donghua Energy. Downstream customers include oil and gas companies (ExxonMobil, Shell, CNPC, and Sinopec), refineries, and oilfield service providers (Halliburton and Weatherford). In the future, driven by the deep development of global oil and gas resources, enhanced oil recovery (EOR) and the promotion of green corrosion inhibition technology, this product will develop towards low-toxicity and environmentally friendly types and be combined with intelligent oilfield corrosion monitoring technology.

The global Oil-soluble Imidazoline Corrosion Inhibitor market size was estimated at USD 937.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
