Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on OLED Emissive Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. OLED emissive materials are the core functional components in OLED displays, directly determining their light-emission efficiency and color performance. They represent the most technically demanding and high-barrier category among all OLED materials. The main types include red, green, and blue emissive materials, typically composed of host materials, dopants, and assistant layers. The performance of these materials critically affects display brightness, color gamut, energy efficiency, and operational lifetime. Upstream raw materials mainly consist of organic synthesis intermediates, metal complexes, high-purity organic solvents, and evaporation-grade targets, requiring extremely high standards of molecular design and purity control. Downstream customers primarily include OLED panel manufacturers such as Samsung Display, LG Display, BOE, Visionox, and Tianma Microelectronics, as well as end-device makers in smartphones, TVs, and automotive displays. As of 2024, the global annual production capacity of OLED emissive materials was approximately 180 tons, with actual sales of about 132 tons. The average selling price stood at around USD 22,400 per kilogram, and gross margins ranged from 45% to 55%, reflecting the high value-added nature of the segment. Japan, South Korea, the United States, and Germany together accounted for over 85% of global supply, with leading manufacturers including Universal Display Corporation (UDC, U.S.), Idemitsu Kosan (Japan), Sumitomo Chemical (Japan), Merck (Germany), and LG Chem (South Korea). Chinese producers are accelerating R&D in material formulation and deposition technology localization, though most remain in the mid- to high-end substitution stage. With the commercialization of high-efficiency blue materials and TADF-based systems, the

OLED emissive materials market is expected to sustain stable growth in the coming years.

The global OLED Emissive Materials market size was estimated at USD 2957.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
