## Abstracts

The OLED flat laminating machine is a piece of equipment specially used for the production of OLED displays. It is mainly used to evenly cover the surface of the flat OLED panel with a protective film or functional film to improve the performance of the panel and extend its service life. The equipment ensures that the OLED panels can resist the influence of external factors such as scratches, oxidation, and ultraviolet rays during use by precisely controlling the thickness and adhesion of the film layer, thereby improving their durability and display effect. OLED flat laminating machines are widely used in OLED panel manufacturing in smartphones, TVs, wearable devices and other fields. With the continuous advancement of OLED technology and the growth of market demand, the technology of flat laminating machines is also constantly developing, trending towards high precision, automation, energy saving and environmental protection.
