Abstracts

Silicon based OLED, also known as Micro OLED, is a micro display technology that combines semiconductors and OLEDs. Silicon based display panels can be made smaller in size, while also possessing characteristics such as high brightness, high precision, lightweight, low response time, and low power consumption. It is a valuable and promising micro display technology in the near eye display industry. Silicon based OLED micro display is an active organic LED display made by combining CMOS technology and OLED technology and using single crystal silicon as an active driving backplane. The monocrystalline silicon chip adopts mature integrated circuit CMOS technology, combined with outstanding advantages such as OLED fast response, large viewing angle, and low power consumption. It not only achieves active addressing matrix for display screen pixels, but also realizes driving and control circuits for various functions such as SRAM memory and T-CON, reducing external wiring of devices, increasing reliability, and achieving lightweight. The pixel size is 1/10 of traditional display devices, The precision is higher than that of traditional devices. The global market size of silicon based OLED display panels is 252 million USD. It is expected that in the future, with the development of downstream industries and the further penetration of silicon based OLED technology, the global market size of silicon based OLED display panels is expected to reach 1024 million USD in a few years.
