Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on OLED Protective Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. OLED protective films, commonly referred to as TPF (Thin Protective Film) or BPF (Base Protective Film), are specialized ultra-thin layers used to protect OLED (Organic Light-Emitting Diode) display panels during manufacturing, transportation, and final device integration. These films safeguard the delicate OLED surface from scratches, moisture, and mechanical damage without interfering with the optical quality or flexibility of the display. TPF usually refers to a top-side protective layer that can also have anti-smudge or anti-reflection coatings, while BPF is often a bottom layer used during lamination or as part of the encapsulation process. Both play a critical role in maintaining the integrity and performance of OLED screens, especially in flexible and foldable devices.

The global OLED Protective Film market size was estimated at USD 65.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
