The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on OLED Ultra-thin TV competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global OLED Ultra-thin TV production reached approximately 9.1 million units, with an average global market price of around US\$ 1650 per unit. OLED Ultra-thin TV is a type of television that uses Organic Light-Emitting Diode (OLED) technology, characterized by an extremely slim profile. Unlike LCD TVs, OLED panels emit light independently per pixel, eliminating the need for a backlight, which allows for thinner designs, superior contrast ratios, deeper blacks, and wider viewing angles. The "ultra-thin" feature refers to its minimized thickness, often measuring just a few millimeters, enhancing aesthetic appeal and space-saving capabilities.

The global OLED Ultra-thin TV market size was estimated at USD 15000.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.30% during the forecast period.
