### Report Overview

Olive pit granules/flour is the result of a complex treatment process of olive oil production residues. To produce olive oil, the olive is always compressed as a whole, i.e. including the kernel. The de-oiled olive cake is then processed in a moist state by means of specialized machines. As part of a centrifugation process, olive pit fragments are separated from pulp and shell rests and subsequently cleaned mechanically, dried and screened based on their particle sizes. The result are light beige, nearly odorless granules without any dust and pulp residues. It can be cleaned further and transformed into high-grade flours and powders.
