Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Olopatadine Hydrochloride Granules competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of olopatadine hydrochloride granules was 250 million bags, with an average price of US\$0.35 per bag. Olopatadine hydrochloride granules are an oral antihistamine, with olopatadine hydrochloride as its main ingredient. It is used to treat symptoms such as allergic rhinitis, urticaria, and itching caused by skin diseases. It belongs to the second-generation antihistamines and inhibits key mediators of allergic reactions. This granule formulation is convenient for children and patients with swallowing difficulties, and is easier to carry and control the dosage compared to liquid formulations. The upstream supply chain of olopatadine hydrochloride granules mainly includes pharmaceutical intermediate and raw material suppliers, such as TCI Chemicals, Merck KGaA, Hunan Kaiyi Pharmaceutical, Shijiazhuang No. 4 Pharmaceutical, and Zhejiang Medicine, which provide olopatadine raw materials and excipients. Downstream customers are mainly pharmaceutical companies and formulation manufacturers, including Santen Pharmaceutical (Japan), Jiangsu Hengrui Medicine, Chia Tai Tianqing Pharmaceutical, Yangtze River Pharmaceutical, and Guangzhou Baiyunshan Pharmaceutical, which are responsible for the production and sales of finished drugs such as granules, oral liquids, and tablets. The downstream market is mainly concentrated in the respiratory system and ENT drug fields. With the rising global incidence of allergic diseases and increased air pollution and pollen exposure, the usage rate of olopatadine hydrochloride granules in children and the elderly has significantly increased. Compared with traditional antihistamines, it has fewer sedative side effects, faster onset of action, and better tolerability, and is therefore widely used in the OTC market and hospital prescription.

drug field. The Chinese market has maintained an average annual growth rate of approximately 8% over the past five years, with particularly significant demand expansion in second-tier cities and primary healthcare institutions. The industry development trend is mainly reflected in the diversification of formulations, the localization of raw materials, and the expansion of the international generic drug market. With the improvement of domestic pharmacopoeia standards and the advancement of consistency evaluation, more companies are developing granule and oral solution dosage forms to meet the needs of pediatric patients for convenient administration. Driving factors include the expanding number of patients with allergic diseases, the upgrading of pharmaceutical market consumption, and the support of medical insurance policies for anti-allergy drugs. Obstacles mainly come from patent protection, fluctuations in raw material prices, and intensified competition from generic drugs. At the same time, national centralized procurement policies have compressed the profit margins of small and medium-sized pharmaceutical companies. In terms of production capacity, the annual capacity of a single production line is approximately 8 to 15 million sachets. The gross profit margin of ordinary formulations is approximately 20% to 25%, while high-purity or pediatric-specific formulations, due to their higher added value, can achieve a gross profit margin of over 35%.

The global Olopatadine Hydrochloride Granules market size was estimated at USD 88.15 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
