Abstracts

An on-board AC/DC charger is an integrated electronic device installed in electric vehicles (EVs) and plug-in hybrid electric vehicles (PHEVs) that converts alternating current (AC) from external power sources, such as residential or public charging stations, into direct current (DC) to recharge the vehicle's high-voltage battery pack. It functions as a critical intermediary between the grid and the vehicle's energy storage system, enabling safe and controlled energy transfer while managing factors like voltage regulation, current limits, and thermal conditions. Typically designed with varying power ratings (e.g., 3.3 kW to 22 kW), these chargers determine the speed of AC charging and are essential for enabling convenient at-home or destination charging, complementing faster DC fast-charging infrastructure which bypasses the on-board unit.

The global On Board Ac Dc Charger market size was estimated at USD 1240.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.75% during the forecast period.
