## Abstracts

An On-Board Aircraft Cargo Loading System is the mechanical and powered equipment installed inside a cargo aircraft that enables the loading, movement, positioning, and securing of ULDs (Unit Load Devices: pallets & containers) and bulk cargo on the aircraft's main deck and lower deck. It is an integral part of every freighter aircraft and many passenger aircraft belly-holds. An On-Board Aircraft Cargo Loading System (CLS) is a built-in system of rollers, ball-mats, power-drive units, locks, guides, and control modules that allows cargo—especially standardized ULDs—to be safely loaded into an aircraft, moved along the cargo floor, positioned accurately, and locked in place during flight. The system reduces manual labor, speeds up turnaround time, ensures flight-safety load distribution, and interfaces with aircraft weight-and-balance systems.

The global On-Board Aircraft Cargo Loading System market size was estimated at USD 636.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
