Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on On board Charger for Electric Vehicle competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global on-board charger for electric vehicle production reached approximately 18.2 million units, with an average global market price of around US\$278 per unit. An on-board charger (OBC) for electric vehicles is an integrated device within the vehicle that converts alternating current (AC) from external charging sources into direct current (DC) to charge the vehicle's high-voltage battery. It manages the power flow during charging, ensuring safe voltage and current levels, and often includes communication protocols to interact with charging stations. The OBC plays a key role in determining the charging speed, compatibility with charging infrastructure, and overall efficiency of the electric vehicle's charging process. The market for on-board chargers (OBCs) for electric vehicles is experiencing robust growth, driven by the accelerating adoption of electric vehicles (EVs) worldwide. As consumers, governments, and automakers shift toward cleaner transportation options, the demand for efficient and reliable charging technologies becomes increasingly important. The OBC is a core component of EV charging systems, enabling AC power from the grid to be safely converted into DC power to charge the vehicle's battery. Automakers are integrating more advanced OBCs with higher power ratings and faster charging capabilities to improve user experience and reduce charging times. Technological innovations are transforming the OBC landscape, with trends including higher voltage systems (such as 800V architectures), bi-directional charging for vehicle-to-grid (V2G) functionality, and silicon carbide (SiC) components that enhance energy efficiency and thermal performance. The market is also being influenced by global policy incentives, stricter emissions regulations, and expanding EV charging infrastructure. Asia-Pacific remains

the largest and fastest-growing region, led by China's strong EV production, while North America and Europe are also seeing increased adoption due to regulatory support and consumer demand. As EV production scales up, the OBC market is expected to grow rapidly, with a focus on compact design, thermal efficiency, and smart grid integration.

The global On board Charger for Electric Vehicle market size was estimated at USD 5060.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.30% during the forecast period.
