Abstracts

On-site mixed explosives refer to customized explosive formulations that are prepared directly at the point of use?such as mining sites, construction projects, or quarrying operations?by blending precursor chemical components (typically an oxidizer like ammonium nitrate and a fuel source, often with sensitizers or other additives) in specialized mobile manufacturing units (MMUs), allowing for tailored energy release, fragmentation control, and enhanced safety by minimizing the storage and transport of finished explosives. This approach provides operational flexibility, cost efficiency in large-scale applications, and reduced environmental footprint compared to traditional pre-manufactured explosives, while requiring stringent regulatory compliance and technical expertise in formulation and handling.
