Abstracts

Oncology therapeutic drugs are pharmaceutical agents specifically designed to treat cancer by targeting malignant cells through various mechanisms, including chemotherapy, targeted therapy, immunotherapy, and hormone therapy, with the primary objectives of inhibiting tumor growth, inducing apoptosis, preventing metastasis, and improving patient survival rates and quality of life. These drugs are developed based on extensive research into cancer biology, such as genetic mutations, signaling pathways, and immune evasion strategies, and are often tailored to specific cancer types, stages, or biomarker profiles to enhance efficacy and minimize adverse effects. The development and approval of oncology therapeutics involve rigorous preclinical and clinical testing to demonstrate safety and therapeutic benefit, with regulatory frameworks like those from the FDA and EMA ensuring that these treatments meet stringent standards before reaching patients. As cancer remains a leading cause of mortality globally, the continuous innovation in this field?driven by advances in genomics, biotechnology, and personalized medicine?aims to address unmet medical needs, overcome drug resistance, and provide more effective and less toxic treatment options.

The global Oncology Therapeutic Drug market size was estimated at USD 1350000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
