### Report Overview

Oncolytic Virus Therapy is an exciting, increasingly recognized discipline in cancer research. Although the connection between viruses and cancer regression was recognized in the early 20th century, it wasn't until the recent development of advanced genetic engineering techniques that true progress has been made using virotherapy to attack and destroy cancer cells. Today, researchers can modify existing viruses to create new oncolytic viruses that are less susceptible to immune suppression while more specifically targeting particular classes of cancer cells. Additionally, these modified oncolytic viruses can be adapted to insert and express cancer-suppressing genes and diagnostic proteins.
