The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on One-Piece Split Clamp-Type Shaft Collar competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global average price of one-Ppiece split clamp-type shaft collar is about US\$2.9 per piece, and the annual sales volume is estimated to exceed 177 million pieces. It is a general-purpose mechanical positioning and fixing component with a compact structure and easy installation. This type of shaft collar adopts an integral C-shaped structural design, and applies clamping force in the circumferential direction of the shaft through a fastening screw to achieve non-destructive fixation of the shaft. It is widely used in automation equipment, conveying systems, medical equipment, transmission mechanisms and testing devices that require axial positioning, limiting, transmission element pre-load or clearance control. Compared with traditional retaining rings or screw-locked shaft collars, its installation does not require the removal of other parts on the shaft, and has higher repeatability and torque retention, and will not damage the shaft surface. It is suitable for soft shafts, hollow shafts or frequent adjustment applications.

The global One-Piece Split Clamp-Type Shaft Collar market size was estimated at USD 515.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
