Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on One-Piece Split Shaft Collars competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. One-piece split shaft collars are a type of axial positioning element with a compact structure and easy assembly and disassembly. They are widely used in rotating machinery, transmission systems, linear guides, and sensor positioning. This type of shaft collar adopts an integral design, with a precision seam prefabricated on the ring body, and radial clamping is achieved through one or more screws. When the screws are tightened, the ring body closes and tightly clamps on the shaft without damaging the shaft surface. Compared with traditional two-piece or seamless press-fit shaft collars, the one-piece split structure has higher concentricity, stronger clamping force, and can be installed without disassembling other components. It is an ideal choice for rapid positioning and axial fixation in industrial automation, packaging equipment, agricultural machinery, and robotic systems.

The global One-Piece Split Shaft Collars market size was estimated at USD 510.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
