Abstracts

The One Piece Stoma System refers to a single-piece, disposable ostomy appliance designed for individuals who have undergone stoma surgery, such as colostomy, ileostomy, or urostomy procedures. It integrates a skin barrier and a collection pouch into one unit, which adheres directly to the peristomal skin, providing a leak-resistant seal and facilitating waste management. These systems are characterized by their ease of use, discretion, and comfort, often featuring hydrocolloid-based barriers that protect the skin from irritation and effluent. They are typically used by patients who prefer a simplified, all-in-one solution that requires less frequent changing compared to two-piece systems, making them particularly suitable for active lifestyles or those with sensitive skin.

The global One Piece Stoma System market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
