Abstracts

The market size of one-stop cycle rental service platform is US\$1690 million. The one-stop recycling rental service platform is a digital service system that integrates the entire process of item rental, recycling, cleaning, maintenance, and re-rental. Through platform-based operations, it realizes the efficient recycling of items among multiple users, improves resource utilization efficiency, and reduces usage costs and environmental burdens. The platform is widely used in office equipment, construction machinery, clothing, home appliances, furniture and other fields, helping to promote the development of the sharing economy and sustainable consumption models. One-stop recycling leasing service platforms integrate equipment leasing, logistics distribution, maintenance management, recycling and reuse, and digital monitoring to provide businesses and individuals with efficient, convenient, and sustainable resource utilization solutions. This not only reduces users' procurement costs and idleness risks, but also promotes the development of a circular economy, reducing resource waste and environmental impact. With the growing adoption of green and low-carbon concepts and the increasing demand for efficient asset management, such platforms are experiencing rapid growth in sectors such as industrial equipment, electronics, office supplies, and shared mobility. Going forward, providers of one-stop recycling leasing service platforms should continuously focus on technology, operations, services, and ecosystem collaboration. First, they should build comprehensive digital management systems to enable full-lifecycle equipment tracking, condition monitoring, and intelligent scheduling to improve asset utilization. Second, they should optimize logistics networks and maintenance service systems to ensure timely delivery of leased equipment and a positive user experience. Furthermore, they should continuously refine their leasing strategies and product portfolios through data analysis and user feedback to achieve differentiated services. Finally, they should actively collaborate with manufacturers, recycling companies, and industry associations to promote the development and

standardization of a circular economy ecosystem. Only by making comprehensive arrangements in technological innovation, operational efficiency, customer experience and ecological cooperation can circular leasing service platform providers gain a competitive advantage in the general trend of sustainable development and achieve long-term stable growth.

The global One-Stop Circular Rental Service Platform market size was estimated at USD 1690.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
