Abstracts

A one-stop digital asset custody platform is a comprehensive platform integrating digital asset storage, security management, compliant transaction support, risk control, clearing and settlement, and multi-account management. It aims to provide institutional and individual users with full-lifecycle digital asset management services. By integrating blockchain encryption technology, multi-signature mechanisms, layered management of cold and hot wallets, smart contract auditing, KYC/AML identity verification, and regulatory compliance interfaces, the platform achieves secure custody and circulation management of various types of digital assets, including cryptocurrencies, stablecoins, NFTs, and tokenized securities. Simultaneously, the platform typically provides API interfaces and a visual operating system to support business scenarios such as asset allocation, return analysis, risk warning, and custody account management, offering standardized and customized custody service solutions for digital asset exchanges, fund management institutions, family offices, and corporate users. The core value of a one-stop digital asset custody platform lies in building a secure, transparent, compliant, and scalable digital asset management infrastructure, reducing the technical barriers and risk costs for users, and contributing to the healthy development and institutionalization of the digital finance ecosystem. The downstream clients of one-stop digital asset custody platforms mainly include cryptocurrency exchanges, digital asset fund management institutions, fintech companies, blockchain project teams, corporate financial management departments, and high-net-worth individual investors. These client groups have high requirements for asset security, compliance, and ease of operation. With the expansion of the digital finance market and the increasing institutionalization, custody services play an increasingly crucial infrastructure role in asset circulation and management. The platform not only provides security support for transaction matching and asset clearing but also extends to value-added services such as custody account management, profit distribution, asset auditing, and compliance

report generation, forming strong customer loyalty and profitability. In terms of profit structure, the industry's main revenue sources include custody fees, account management fees, transaction matching revenue sharing, and value-added service fees. Due to the high dependence of services on technological barriers and security system construction, the overall gross profit margin is relatively high, typically around 56%. One-stop digital asset custody platforms provide users with convenient, secure and efficient digital asset management solutions by integrating multifunctional services such as custody, trading, lending and staking. Its flexible deployment methods and comprehensive services meet the needs of users of different sizes and needs, from individual investors to large institutions. However, while promoting the popularization and application of digital assets, these platforms also face major challenges in ensuring security, compliance and user privacy protection. With the continuous development of technology and the regulatory environment, one-stop digital asset custody platforms are expected to play a more important role in the financial ecosystem.

The global One-Stop Digital Asset Custody Platform market size was estimated at USD 3010.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.60% during the forecast period.
