Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on One-Way Clutch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global one-way clutch production reached approximately 23015 k units, with an average global market price of around US\$ 26 per unit. One-way clutch is a mechanical transmission device, its core function is to achieve one-way power transmission, that is, to allow free rotation or power transmission in one direction, and automatically lock or disengage in the opposite direction. It ensures that power can only be transmitted in one direction through internal mechanical structure design, and automatically cuts off the connection when reversed, thus protecting the equipment from reverse impact or overload damage.

Market Concentration and Key Players: Internationally, one-way clutch market concentration is relatively high, mainly concentrated in Europe and Japan and other developed countries. For example, NTN and Schaeffler and other large manufacturers; from the domestic point of view, one-way clutch manufacturers have Jiangsu Nanfang Seiko and other enterprises.

Manufacturing Processes and Market Trends: The manufacturing process of one-way clutch is undergoing technological innovation from traditional machining to efficient cold pressing, improving product performance through precision stamping, heat treatment strengthening and surface coating, such as adopting cold pressing technology to complete through holes, recesses and stop structures of outer ring at one time, significantly reducing working hours and avoiding falling off of rollers and elastic elements. In terms of market trends, the growth of the global industrial one-way clutch market is mainly driven by the upgrading of the automobile industry, the expansion of new energy vehicles and the demand for high-end machinery manufacturing, especially in the transmission system of new energy vehicles. Future technologies will focus on lightweight design, intelligent integration and

green manufacturing (solid lubrication, low carbon process), promote the evolution of products to high speed adaptability, long maintenance-free cycle and electromechanical integration modules, and support high performance requirements in wind power, aviation and automation equipment.

The global One-Way Clutch market size was estimated at USD 607.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
