Abstracts

A One-Way Data Gateway (also known as a data diode) is a network security device that ensures data can only flow in one direction, typically from a less secure network to a more secure network. This type of system is commonly used in environments that require high-security measures, such as industrial control systems, military networks, or critical infrastructure, where the integrity and confidentiality of sensitive data are paramount. The Unidirectional Security Gateway market has several drivers that contribute to its growth and adoption. A data diode is a unidirectional network device that allows data to move only in one direction, preventing any possibility of information leakage or cyberattacks. With the growing frequency and sophistication of cyber threats, organizations are increasingly concerned about protecting their sensitive data from unauthorized access, data breaches, and cyberattacks. Data diodes provide an effective solution by creating an air gap, allowing data to flow securely in one direction only.

The global One-way Data Gateway market size was estimated at USD 417.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
