Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on One-Way Security Screw competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. One-way security screw is a fastener that achieves one-way locking through a special structural design. The one-way locking mechanism only allows the screw to be screwed in one direction (usually clockwise). When rotating counterclockwise, it is prevented from loosening by a self-locking structure (such as a cam, elastic gasket or special-shaped thread). Special tools (such as hexagon sockets or special screwdrivers) are required for removal. One-way security screws have anti-tampering functions. They are mostly made of stainless steel or high-strength alloys, and have rust and corrosion resistance. They are used in automobile tires, license plates, solar panels, power facilities, public facilities (such as guardrails, street lights, manhole covers), power facilities, railway facilities, oil field facilities, public fitness equipment and other fields.

The global One-Way Security Screw market size was estimated at USD 407.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
