Abstracts

Onion self-supporting tanks are specialized storage structures designed for the bulk handling and preservation of onions, utilizing a unique construction method where the roof and walls are integrated into a single, self-supporting dome or vault shape without the need for internal support columns or frameworks; these tanks are typically constructed from galvanized steel or aluminum panels that interlock to form a rigid, weatherproof enclosure, allowing for natural ventilation through strategically placed openings to maintain optimal temperature and humidity levels that prevent spoilage, sprouting, or moisture buildup, while also enabling efficient loading and unloading operations through large access doors and sometimes incorporating mechanized systems for aeration or climate control to extend the shelf life of the stored produce.

The global Onion Self Supporting Tanks market size was estimated at USD 78.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
