Abstracts

Online Adaptive Therapy Solutions refer to advanced radiotherapy technologies that continuously analyze and adjust treatment plans in real-time based on changes in a patient's anatomy, tumor response, or physiological conditions during therapy sessions. Unlike conventional radiotherapy, which follows a pre-determined treatment plan, these solutions integrate artificial intelligence (AI), real-time imaging, and automated treatment adaptation to optimize radiation delivery with high precision. Key components of Online Adaptive Therapy Solutions include real-time imaging systems (such as MRI or CBCT), automated contouring and dose calculation algorithms, and AI-driven decision support tools that assess variations in tumor size, position, and surrounding healthy tissues. These systems ensure that each radiation session is tailored to the patient's current condition, improving treatment efficacy while minimizing damage to healthy tissues.
