## Abstracts

The online credit system is a financial service platform based on the internet and big data technologies. It primarily uses online channels to match borrowers and lenders' information, conduct credit assessments, and manage fund disbursements and repayments. Leveraging cloud computing, artificial intelligence, blockchain, and other technologies, it authenticates borrowers' identities, performs credit ratings, and conducts risk control, thereby improving the efficiency of credit review and loan disbursement. Compared with traditional credit models, the online credit system offers advantages such as ease of operation, a simplified application process, rapid loan disbursement, and wide coverage. It can meet the diverse funding needs of small and micro enterprises, self-employed individuals, and individual consumers.
