## Abstracts

The online EL defect detector is a device specially designed to detect electroluminescence (EL) defects of solar cells in solar photovoltaic modules. The online EL defect detector uses the electroluminescence principle of crystalline silicon. When a forward voltage is applied to the photovoltaic cell module, the material inside the module excites photons. These photons are captured by a highly sensitive camera and converted into a visual image, so that defects and faults inside the photovoltaic cell module can be visually observed.

The global Online EL Defect Detector market size was estimated at USD 384.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
