Abstracts

O2O (online to offline) refers to a new-type e-commerce model in which through the websites in the online shopping malls or their own websites, the merchants show the information of products and services to customers; meanwhile, through QR code, APP or location based service (LBS), customers login the online stores or filter the online products and services and then make the order and pay the bills, but they validate and experience the consumptions offline. This model not only meets the personalized demand of customers, but also helps the merchants to propagate their information of products and services faster, farther and wider. One of the key trends in O2O is the deeper integration between online platforms and offline stores. Retailers and service providers are increasingly using digital tools to enhance in-store experiences. This includes the use of smart devices, augmented reality (AR), and data analytics to improve customer engagement and streamline operations, creating a seamless online-to-offline experience. With the widespread adoption of smartphones, mobile apps have become the core platform for O2O commerce. Consumers are using mobile apps and social media to browse products, make payments, and book services online, while offline experiences, such as shopping or service consumption, are made convenient via these mobile platforms. Businesses are focusing on improving mobile user experiences, such as faster payment options and personalized recommendations. The growth of smart retail is driving the evolution of O2O. The application of big data and artificial intelligence (AI) allows businesses to better understand consumer behavior and optimize inventory and service delivery. Smart retail solutions combined with O2O can improve both in-store shopping experiences and operational efficiency, enabling businesses to offer personalized services and boost sales conversions. Asia-Pacific is the largest Online to Offline Commerce market with about 36% market share. North America is follower, accounting for about 32% market share.

The global Online to Offline Commerce market size was estimated at USD 950620.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.90% during the forecast period.
